### Series 2005B Cabinet

These columns further increase the versatility of the Series 2005 cabinets, by effectively integrating the well proven features of the Type B cabinet into the Series 2005 range.

The columns complement all existing configurations, and they may be specified in all 600, 700, and 800 wide cabinets, which may then be bayed with all 2005 cabinets of the same height and depth.

They can be fitted to the front, rear, or both front & rear of the cabinet, and produce a setback of just 45mm thus ensuring maximum usable depth.

These columns are intended for use where ready access to equipment is a primary requirement and a door is not needed.

Radio, TV, and Recording Studios are good examples of this application.

Should doors be required, all of the 2005 range of doors may be considered, in either glass, metal or acrylic.

Care should however be exercised when using doors with these columns, as many panels have switches, handles etc. that protrude out and could interfere with the door closing. Distance between mounting and inside of door is 45mm. As with all our cabinet range, all standard accessories are available.

Series 2005B mounting angle
