

### Vertical Power Distribution Board

The Vertical Power Distribution Board has been designed to accommodate AC adaptors or voltage transformers. The sockets are angled at 45° to minimise any overlap of plug in transformers thus ensuring maximum use of the Vertical Power Distribution Board. The panel is supplied fully wired with a 2.5m lead and plug.

This well proven unit comes with a versatile mounting system, allowing it to be used in all MFB Racks and Cabinets and mounted on either the left or right hand side with equal ease.

### Vertical Power Distribution Board complete with Neon Indicator Light Switch

All vertical power distribution boards can be fitted with a neon indicator light switch, for when isolation of the panel is a requirement.

### Customize your power board

*Do you require something special? MFB are able to offer a large range of configurations. From IEC, Screw Lock Plugs, and Dual Polarity to Multiple Circuits, Individually Switched and every different socket and plug you can think of. Please discuss your requirements with an MFB representative for more details.*
