

# SLIMLINE CABINETS

## Slimline Cabinets

Slimline Cabinets come in 2RU & 3RU versions. The 2RU stands out from the wall 100mm whilst the 3RU projects out 150mm.

Both are intended for the smaller Patch Panel/ Hub installations that demand a more prestigious solution than the usual low budget approach.

They present a tidy, secure solution suitable for small office/home office (SOHO) applications.

With their low profile and heavily angled sides they are ideal for use in confined, high traffic areas like passageways and thoroughfares.

These housings are of robust construction, have a zinc pre-treatment and are finished in powder coat Gipsy Beige texture.

## Features

- Key lockable, so they need not be located in a secure area
- Internally, provision is made for various configurations of rack panels, smaller hubs, stallion boards etc.
- 4x50mm knockouts are provided in both the top and bottom to facilitate vertical stack mounting and inter-cabling between units
- Large cable entry openings are provided in the rear
- Venting to the top and bottom front ensures low level heat will be dissipated.

## Options

A Gear Tray may be mounted to the inside rear, further increasing the cabinet's versatility.
