NOTES

Maximum depth of equipment 200mm, when swing frame is used.

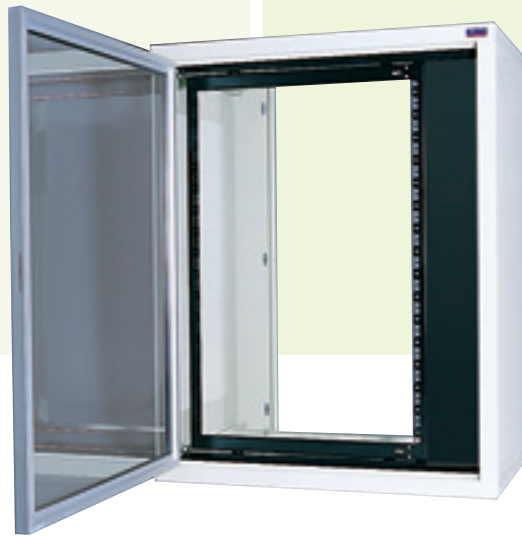

This cabinet must be mounted on a wall to ensure squareness.

Options

- Swing frame for ready access to rear of panels. Note: This option reduces the usable height by 2 rack units.
- A combination of swing frame and fixed mounting angles is possible. This means that a swing frame can be fitted above or below the mounting angles to provide greater flexibility. Sizes for swing frame for this combination are available in 6RU, 12RU, 18RU, 39RU and 45RU. (Deduct 2RU for usable rack height.) For example, an 18RU cabinet could be arranged with a 12RU swing frame and 6RU mounting angles or vice versa.

Finish

All components have a zinc phosphate pre-treatment prior to either powder coating or baked enamelling. Refer to the colour chart on inside rear cover for colour details.

700mm Swing Frame

These cabinets facilitate the mounting of equipment or cantilever trays in a 19" swing frame to accommodate modems, hubs, etc. The additional 100mm to the width of the unit allows unrestricted swivel for equipment or shelf up to 400mm deep.
