Re-design of 19" Rack Mount Din Rail

MFB have re-designed the 19" rack Mount Din Rail to allow for mounting to both vertical mounting angle configurations.

The revised rail now has the flexibility to mount on both the type A and type C mounting angles.

The rail fixes to the front face of the mounting angle. A Din Rail Front Panel can be fitted over the rail if required.

DIN rail and front panel are designed to accept DIN rail mounting components like circuit breakers, earth bars etc.

The DIN rail is finished in zinc and yellow Passivate whilst the front panel comes in a powder coat black finish. The panel cut-outs will accept various blanking plates to infill between components and can be customised to suit individual applications.

Din Rail and Front Panel
